Sprint Report 2

Product Name: HitchHike

Team Name: Uplyft

Date: 11/3/19

Actions to stop doing:

As a team we need to focus on working and coming on time for meetings. We also need to stop miscommunicating with each other so that we can design functional backend and frontend integration.

Actions to start doing:

We need to start using our own branches on GitHub to avoid accidental commits that can break functionality and merge conflicts. We also need to work on integrating the frontend app screens with the backend API and server database. We need to step up the amount of time we spend working on the project throughout the week. To do this we have created a sheet in which we can log the amount of hours we spend working and what was accomplished.

Actions to continue doing:

We want to continue working on the app's front end. We need to continue developing the visual design and UX to create a polished experience. It is sometimes difficult to predict how long

some tasks will take, such as integrating the login and signup functions. Now that we have completed these progress should speed up as we can work on other parts of the app.

Work Completed:

We have completed the following user stories:

- I am a user and I want to be able to sign in and signup.

- I am a driver and I want to be able to post a ride.

- I am a rider and I want to be able to view rides.

- I am a rider and I want to be able to request a ride.

Work Completion Rate:

- User stories completed: 4

- Total idea work hours: 80

- Total days: 14

- User stories per day: 3.5

- Total ideal work hours per day: 5.7
