Sprint Report 1

Product Name: HitchHike

Team Name: Uplyft

Date: 10/20/2019

Actions to stop doing:

As a team, some of the things that we wish to stop doing include letting the scrum meeting last more than 15 minutes. In general, we end up extending for the purpose of working on the product itself, however, that ruins the purpose of the scrum meeting.

Actions to start doing:

As a team, we want to start having mini team meetings. For example, if one developer is developing the sign-in page, and one developer is developing the sign-in routine in the backend, they should have a mini-meeting in order to discuss how to proceed with development. We want to do this in order to make sure that scrum meetings don't end up taking up to an hour and stick to the 15-minute recommendation.

Another thing we want to start doing is giving more importance to tasks such as spikes and infrastructure. During this sprint, we consistently underestimated the learning curve for all of the tasks, which led to significant delays in task completion.

Actions to continue doing:

We would like to continue working hard towards our goals. Although we may have underestimated the amount of time it will take for certain tasks, we all worked hard in order to achieve them. We would also like to continue meeting regularly, as that helps with communication of progress and expectations (such as what the front-end needs to do in order to interface with the backend).

Work Completed:

We completed all of the user stories that we had listed. This included:

- I am a user and I want to sign up with my school email because I want to make an account
- I am a rider and I want to be able to sign in because I want to request a ride
- I am a user and I want to be able to verify my email in order to make the app more secure

Work Completion Rate:

- Total user stories completed: 3

- Total number of ideal work hours: 40

- Total number of days: 10

- User stories per day: 3.333

- Total number of ideal work hours per day: 4
